DETAILED ACTION

Claim Rejections - 35 USC § 112

Claims 3-5 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See MPEP § 2172.01. The omitted structural cooperative relationships are: Applicant attempts to claim the materials for alternating layers of metal; yet fails to previously recite the structural relationship between the alternating layers of metal and claim 1. Therefore claims 3-5 cannot be examined due to their indefinite nature.

3. The device of claim 1, wherein the alternating layers of metal material comprise a metal and a metal nitride system.

4. The device of claim 3, wherein the alternating layers of metal material comprise a metal and a metal nitride system.

5. The device of claim 4, wherein the metal comprises one of tantalum, titanium and tungsten.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Watanabe et al ('337).

Watanabe teaches the following claimed limitations as cited below:

1. A device comprising:
a via comprising alternating layers of dissimilar dielectric materials defining vertical corrugations in a wall of the via (Fig. 1B(108, 109, 110)); and
a capacitor formed over the alternating layers of the via to achieve a corrugated sidewall profile within the capacitor (Col.5, lines:28-40).
2. The device of claim 1, wherein the alternating layers of dielectric comprise alternating layers of silicon oxide and silicon nitride(Fig. 1B(108, 109, 110)).
